Newcomer to the tech industry with project experience in building applications. Eight years of customer service experience in multiple team-based, fast-paced, and customer-facing roles. A well-equipped hire with an excellent work ethic and a desire for continued learning.

Education

CAREERFOUNDRY

Certification: Full Stack Immersion   Graduation Date: December 2021
Certification: Introduction to Front-End Development

WEST CLERMONT HIGH SCHOOL   Batavia, OH
June 2018

Projects

My-Flix:
A web application built using the following technologies: Angular, HTML, TypeScript, JavaScript, and MongoDB. This project showcases information on video games. It allows users to create, update, delete an account, and save a game to their favorites.

Texter:
A native messaging application created from the implementation of React-Native, Expo, Gifted Chat, and Firebase Firestore. This project allows users to create a screen name and choose a background color. Users can send data such as pictures, location information, and standard SMS messages.

MEET:
An application with the purpose of showcasing events in local cities. This project uses TDD to make a serverless PWA with React. User stories were applied in the design process of the application and Google APIs were utilized for the calendar. Users of this app can: filter events by city, show/hide details of events, use the app offline, and view a chart showing amounts of upcoming events by city.

Technical Skills

Programming Languages: Javascript, HTML, CSS, Typescript
Libraries/Frameworks: Angular, React, React-Native
Database: SQL, MongoDB, Firebase
Other: Typing speed 45 WPM, Excel, Google Workspace
